

RADIOLOGICAL vs SURGICAL vs PATHOLOGICAL ANATOMY: THE FIRST **EHNS** ACADEMY COURSE

DON'T MISS THE OPPORTUNITY!

**1ST - 6TH
SEPTEMBER
2025**

Ferrero Foundation
Alba, Italy

A course proposing the comparative study of radiological vs surgical anatomy in 3D, in open neck and inside-out approach, to improve the diagnostic work-up, the therapeutic planning and the pathological evaluation of head and neck malignancies, in a multidisciplinary approach.

Requested patronages

In head and neck, the need to improve the quality of life after treatments has favored the introduction of therapeutic strategies aimed at minimizing morbidity and the negative impact on patients.

This has given great impetus to the development of minimally invasive therapies, both surgical and non-surgical. In this context, the imaging assumes a prominent and crucial role in patient selection for multimodal therapies.

This first European Course, sponsored by the European Head and Neck Society (EHNS) and the European Society of Head and Neck Radiology (ESHNR) aims to provide a complete anatomical, radiological, surgical, pathological and oncological overview of the head and neck district, to improve the diagnostic work-up and the therapeutic approach to different pathologies, according to the most modern protocols.

The course will be organized in 6 daily modules, each dedicated to a single head and neck region.

The program of each day includes:

- **in the morning** → an anatomical lecture, followed by an extensive overview on radiological anatomy, held by experienced Head and Neck Radiologist, completed by Key-note lectures on radiological pearls and pitfalls and interventional procedures
- **at lunch** → a symposium managed by pathologists focused on the aspects influencing the specimen evaluation
- **in the afternoon** → comparative study of surgical anatomy, in open neck vs inside-out approach, projected in 3d and commented simultaneously in different relive procedures by skilled head / neck surgeons
- **at the end of each day** → a multidisciplinary consensus debriefing will be held.

RATIONALE

It is possible to attend the entire course or one / more modules.

The whole cadaveric dissection will be carried out, captured, and broadcasted entirely in 3D to enhance the anatomical details.

The Course is proposed for Radiologists, Head and Neck surgeons, Otolaryngologists, Maxillo-facial surgeons, Neurosurgeons, Oncologists, Oral surgeons, Plastic surgeons, Radiation Oncologists, Pathologists.

Hoping that this course will find your favor, the faculty looks forward to seeing you numerous in the Ferrero Foundation of Alba to experience intense days of multidisciplinary scientific collaboration.
